Profile

I hold a Master of Engineering in Bioinformatics from DTU, with strong hands-on experience in machine learning and deep learning gained through my thesis in collaboration with Novo Nordisk. Working in a Unix-based HPC environment, I developed Python and R pipelines for analysing large volumes of biological data, and designed and trained models with the intent of deployment within Novo Nordisk's production environment. A central part of my thesis involved generative deep learning in the form of latent diffusion models, giving me an in-depth understanding of generative modelling in PyTorch and how such models are trained at scale. I find it rewarding to translate complex model behaviour into clear, actionable insights for stakeholders beyond purely technical audiences. I also maintain a personal website documenting my projects, including an end-to-end MLOps project involving MLflow, FastAPI, and Docker. On a personal level I am social, curious, and outgoing — qualities developed both in research and beyond, including four years as a volunteer event coordinator responsible for safety and logistics at events of over 1,000 attendees.

Education

Masters thesis in collaboration with Novo Nordisk

Feb 2025 – Jan 2026

Title: Cell type annotation in transcriptionally homogeneous single-cell data

Subtitle: An Evaluation of Differential Expression Analysis and Advanced Embedding Methods

- Utilizing HPC systems in industry
- Preprocessing massive datasets
- Developing server based computational pipeline in R and python
- Building and training deep generative models.

Technical university of Denmark

Sept 2023 – Dec 2025

M.Sc. Eng. in Bioinformatics and Systemsbiology

- **Coursework:** Software Architecture, HPC, Programming, Immunology, Machine learning.
- **Grade:** 12/12 (thesis), 10.35 (GPA)

University of Sydney, Australia

Fall Semester 2022

Undergraduate exchange program

- **Key take away:** Working and studying in an international environment

University of Copenhagen

Sept 2020 - June 2023

BSc. Natural Resources

- **Thesis title:** A Study on Possible Effects of Single Prophage Inserts on a Reduced Genome Escherichia Coli.
- **Grade:** 10/12 (thesis), 9.53 (GPA)

Work experience

Research assistant

Copenhagen, DK

4Life Solutions Aps

July 2023 – August 2024

- Applied microbiology
- Data collection, analysis and documentation

Event Coordinator*Egmont H. Petersons Kollegium**Copenhagen, DK
July 2021 – August 2025*

- I volunteered as event coordinator where i was responsible for safety and security in collaboration with Eventcrew.dk at events with 1,000+ attendees.

Math tutor*Mentor Danmark**2019 – 2023*

- I developed the ability to plan and adapt math tutoring to the varying skill levels of my students.

Waiter and beer sommelier*Skaal Craft Beer and Food**2019 – 2023*

- Delivered engaging presentations as a Beer Sommelier, which sharpened my ability to clearly convey information to audiences of varying prior knowledge.

IT Skills

Languages: C++, Python, R, mySQL, Unix/Bash, Latex

Languages

Danish(native), English(fluent - 112/120 TOEFL score), German (beginner)
